

Medical Coding and Narrative Quality

Case ID: ICSR-2026-0001

1. Coding Worksheet

Domain	Source / verbatim term	Normalized term	Coding term / representation	Decision & rationale
Product	Amoxicillin	Amoxicillin	Amoxicillin	Normalized to active medicinal ingredient; no brand/manufacturer supplied.
Dose	500 mg	500 mg	500 mg	Retained exactly; no conversion required.
Dosage form	Capsule	Capsule	Capsule	Retained exactly.
Route	Oral	Oral	Oral	Retained exactly.
Indication	Acute bacterial sinusitis	Acute bacterial sinusitis	Acute sinusitis (medical concept)	Normalized without adding a different diagnosis.
Reaction	Urticaria	Urticaria	Urticaria (MedDRA Preferred Term)	Direct match to reported reaction term.
Reaction detail	Mild facial swelling	Facial swelling	Face oedema (MedDRA Preferred Term)	Separate reported clinical sign; no extra severity inferred.
Outcome	Recovered/resolved	Recovered/resolved	Recovered/resolved	Case outcome field, not a reaction code.
Causality	Probable	Probable	Probable	Retained from source; not independently altered.

2. Case Narrative

ICSR-2026-0001 — CASE NARRATIVE

A 54-year-old female patient in India (patient ID PT-0001) with a medical history of hypertension and type 2 diabetes mellitus was treated with amoxicillin 500 mg capsules orally three times daily for acute bacterial sinusitis. Amoxicillin therapy started on 15 September 2026 and stopped on 19 September 2026 after the drug was withdrawn.

On 18 September 2026, approximately three days after treatment began, the patient developed generalized itchy raised wheals over the trunk and upper limbs with mild facial swelling. The reported adverse event term was urticaria. The event was assessed as non-serious. Cetirizine 10 mg orally once daily for three days was given for the event.

The patient recovered/resolved by 20 September 2026. Dechallenge was reported as positive and rechallenge was not done. Concomitant medicines were metformin 500 mg twice daily and amlodipine 5 mg once daily. No significant abnormality was reported in relevant laboratory tests. The reporter was a physician (MBBS, MD) from India.

The source case records the causality assessment as probable. This narrative uses only the supplied case facts and does not add an unreported diagnosis, test result, exposure, or causal conclusion.

3. Quality-Control Checklist

MEDICAL CODING & NARRATIVE QUALITY — QC CHECKLIST

Case ID: ICSR-2026-0001

- [✓] Source case identified and retained.
- [✓] Patient demographics traceable to source.
- [✓] Product, dose, dosage form, route and frequency documented.
- [✓] Indication documented.
- [✓] Event verbatim term and description retained.
- [✓] Event onset and stop dates retained.
- [✓] Seriousness and outcome retained.
- [✓] Drug action, dechallenge and rechallenge retained.
- [✓] Concomitant medicines, treatment and laboratory information retained.
- [✓] Source causality assessment ("Probable") retained without independent alteration.
- [✓] Narrative is chronological.
- [✓] Narrative is concise and neutral.
- [✓] Narrative does not invent missing facts.
- [✓] Facial swelling is separately represented as a reported clinical sign.
- [✓] Coding decisions include traceable rationale.

CODING CAUTION

Exact numeric MedDRA LLT/code selection requires access to the applicable licensed/current MedDRA browser/version. This worksheet therefore records the concept/Preferred Term representation and does not invent a numeric code.

RESULT

The narrative is traceable to the supplied source case and follows the patient timeline.
